

Anay is a Deep-Learning Research and Development Engineer at Intel Technologies India Pvt Ltd, developing scalable solutions and prototyping latest deep-learning algorithms for challenging high-impact problem areas like healthcare, autonomous driving etc. His research interests include un-supervised/weakly supervised learning, and its applications to meta-learning, edge inferencing, deep-learning on low-power, low-compute hardware. He also takes interest in Smart Energy solutions and has developed several solutions around it, along with couple of patents focusing on the intelligent use of Renewable energy systems in a Microgrid. He has completed his Undergraduate Degree in Electrical and Electronics Engineering.
